Re: ICA Watershed, 256 Marginal Street, East Boston EEA# 15666

Dear Secretary Beaton,

On behalf of Boston Harbor Now, thank you for the opportunity to comment on the Institute of Contemporary Art (ICA) Watershed project’s Environmental Notification Form. Boston Harbor Now staff has reviewed the accompanying project plans and was present at the April 18th MEPA meeting and site visit.

We want to say upfront that we are looking forward to this project moving through the permitting process and to completion. We are excited by the ICA’s latest proposal to connect two waterfront neighborhoods via free public access to seasonal art exhibits. We strongly support the ICA’s significant infrastructure investment and the economic benefits that will filter down to existing Boston Harbor Shipyard marine-industrial tenants and the local community. Our comments follow.

**Project Description**
Located at 256 Marginal Street, the ICA is proposing to extend its Seaport District location to a vacant building in the Boston Harbor Shipyard and Marina. The proposed site sits on filled Commonwealth tidelands and is within the East Boston Designated Port Area (DPA). It is owned by Massport and under lease to the Boston Harbor Shipyard.
In total, the project parcel is 18,108 SF and includes a 50-foot by 300-foot long building and parking area. As proposed, the project will renovate Building 23/33 for use as seasonal artist installation space. It will be open to the public and includes:

- A gallery focused on East Boston’s maritime history,
- Flexible art and programming space,
- An 859 SF south-facing terrace, and
- Eight on-site parking spaces exclusively for staff and ADA accessibility.

**Designated Port Areas**

The Massachusetts Office of Coastal Zone Management (CZM) has established four Designated Port Areas within Boston Harbor: South Boston, Chelsea Creek, Mystic River, and East Boston. According to CZM’s Policy Guide, the two central principles of the State’s DPA policy are to promote water-dependent industries as an important sector of the State’s economy and to prevent the loss of areas that have key characteristics:

- Access to a commercially-navigable waterway and associated developed waterfront;
- Backland space for industrial facilities and operations; and

There are three types of uses allowed within a DPA boundary: 1) water-dependent industrial uses 2) supporting DPA uses and 3) temporary uses. Section 2.5.2 of the ENF proposes to introduce the ICA Watershed public waterfront art space as a supporting commercial use within the East Boston DPA.

Supporting uses can be industrial or commercial and must provide direct economic or operational support to water-dependent industrial businesses in DPAs. 310 CMR 9.02. The regulations consider commercial use compatible with DPAs unless the use conflicts with port operations or calls for excessive consumption of port space. We note that the ICA Watershed project does not fit squarely within the traditional definition of a commercial use. However, the unique circumstances surrounding this proposal coupled with existing commercial uses in the Boston Harbor Shipyard could provide direct economic support to the Shipyard and its water-dependent industrial tenants.

As longtime advocates of the working port, Boston Harbor Now recognizes the importance of continued investment in working port infrastructure. We also understand that maritime industrial businesses often lack the capital to invest in and improve existing infrastructure. The ICA extension project is a unique opportunity for much-needed economic investment in the Boston Harbor Shipyard. Building 23/33 has sat vacant and condemned for fifteen years. The rough condition of the structure and necessary costly repairs makes it difficult to find a maritime-industrial tenant. The proposed $4 million investment by the ICA Watershed project has the potential to provide short and long term benefits in support of the overall purpose of DPAs—to promote and maintain marine water-dependent industrial uses.

The ICA Watershed gallery project is able to absorb the high cost of improving existing infrastructure where a traditional maritime-industrial business is not. For this reason, we are supportive of the project and the related economic benefits to the Boston Harbor Shipyard. Before the project is approved, we ask that the Chapter 91 license application process address:

- Balancing public access with the needs of an active working port area
• Mechanisms to minimize conflicts with existing maritime businesses (painted Harborwalk, rumble strips on pedestrian zones, signage, and gates) and,
• A shorter-term license or periodic license review to determine when the parcel can/should revert back to traditional water-dependent maritime industrial use, and
• A Draft Management Plan that ensures public safety hazards are minimized to the extent possible.

Public Access
We appreciate the proponent and the Shipyard’s efforts to maintain the existing Harborwalk through the DPA site, though recognize why DPAs do not legally require this access. Water-dependent industrial uses have the potential to create real public safety hazards for pedestrians on the Harborwalk. As presented in the ENF, the proponent plans to minimize potential interferences with the working shipyard by:

• Limiting gallery ingress/egress to the Marginal Street side of the building
• Promoting water taxi use as the preferred method of transportation
• Separating pedestrians from active marine industrial uses with barriers and gates
• Adding signage to direct visitors to the Watershed from the water taxi dock and Shipyard entrance.

There needs to be a careful balance between creating a continuous Harborwalk through a marine industrial site and maintaining an appropriate level of public safety. Figure 1-13 of the ENF includes a marked/highlighted pedestrian walkway on the North side of the building. We encourage this type of pedestrian friendly strategy and others to increase safety and minimize potentially hazardous conditions.

The ICA Watershed is not the first art/artist-focused installation on East Boston’s DPA. Atlantic Works located at 80 Border Street is an artist work-only space that hosts several exhibits throughout the year. While the Watershed would offer a similar experience, the proposed gallery extension and its affiliation with the ICA is a new experience unlike any other in Boston Harbor. While Atlantic Works is a good example of an existing art gallery in East Boston, the ICA Watershed will attract larger groups of local residents, regional residents, and seasonal visitors.

Until we have a basic set of guidelines for creating public access through a DPA, we ask that the proponent provide additional details about existing marine industrial uses in the Shipyard and potential points of conflict with the visiting public. For example, the ENF includes a projection of ICA visitors but does not include numbers of current truck dependent businesses, frequency of use, and overlap with gallery hours of operation.

During the MEPA site visit, we were encouraged to learn that the Shipyard actively regulates the time of day, area, and crowd size for all public events hosted at the Shipyard. Presently, the Shipyard handles weekend tour groups and visitors to the Downeast Cider Brewery and KO Pies restaurant. While today’s visitors to Downeast and KO Pies have little effect on Shipyard operations, the total number of visitors will increase with the opening of the ICA Watershed. As the gallery grows in popularity and visitors, the ICA and Shipyard team will need to actively monitor visitor numbers and adjust visitor management strategies to ensure the public use and activation of the DPA areas have little to no effect on existing maritime industrial businesses.
Water Taxi
One of the highlights of the ICA’s proposal is the water taxi route from its Seaport location to the Boston Harbor Shipyard. The proponent anticipates that access to the project will be primarily by water taxi from the Seaport District location. Figure 3-1. Boston Harbor Now is working on a comprehensive Boston Harbor Water Transportation Study. We are particularly interested in the ICA’s proposal to connect Seaport visitors with East Boston’s waterfront and look forward to reviewing details about the proposed water taxi service and management as the project moves forward through permitting and licensing.

Other Transportation Alternatives
As stated in the transportation section of the ENF, the Watershed can be accessed by water taxi, public transit and nearby Hubway stations. We applaud the proponent’s efforts to encourage alternative modes of transportation. We are especially supportive of the no public parking option as this will help minimize potential conflicts with existing maritime uses and businesses.

During the April 18th site visit, our team noted that sidewalks leading into the Shipyard are narrow and intermittent for the last stretch of Marginal Street closest to the entrance of the Yard. Pedestrians often share the road with local traffic and commercial trucks entering/leaving the Shipyard. Pedestrian access at the Marginal Street entrance should be addressed in more detail in future project filings.

Climate Change
As presented in the ENF, the project site is within the 100-year FEMA flood zone. The floor elevation of the existing and proposed building is 16.5 BCB. During the site visit, the proponent clarified that the proposed building is structurally connected to and part of a network of existing buildings. As constructed, raising the ground floor of the building would be a challenging and costly retrofit that the ICA is not prepared to absorb.

To address future flooding on site, the proponent intends to wet flood proof the space by moving essential mechanicals one foot above the BFE, using water-resistant construction materials below the BFE, and installing flood openings to allow floodwaters to exit quickly. Taking into account the structural constraints of the existing building, the proposed techniques would allow the ICA to temporarily shut down operations, allow floodwaters to recede, and be back online quickly and efficiently.

We look forward to the completion of the ICA Watershed and its grand opening next Summer. Thank you for your consideration of our comments.

Sincerely,

Julie Wormser
